

A WHOLE SATELLITE DISTRIBUTED THROUGH A SINGLE COAXIAL CABLE

dLNB - DIGITAL dCSS LNB AND PROGRAMMER (REF. 747321/22 and 723301)

- Static or dynamic configurable mode
- PC-based configuration
- Available diagnostics
- dCSS compatible (SCR I - EN50494 & SCR II - EN50607)

dLNB - DIGITAL dCSS LNB AND PROGRAMMER

DESCRIPTION

The dLNB product range uses **dCSS (Digital Channel Stacking System)** which is equivalent to having a whole SAT processing headend the size of an LNB.

This technique consists in processing the transponders of a satellite and positioning them in the SAT band according to the installation requirements.

Two operation modes are available:

STATIC MODE: up to 32 packets can be generated following a simple SAT distribution. Any TVSAT receiver can capture signals when working in this mode.

DYNAMIC MODE: each SAT packet that is generated is assigned a network user, who is able to modify the packet contents at will with a compatible STB. This mode is limited to 24 *User bands*.

The **dLNB configuration** is carried out with a Windows-based software stored in the programmer (ref. 723301). The programmer can store up to 5 configurations and allows them to be dumped to the dLNB.

The dLNB **complies with standards SCR I and SCR II (dCSS)**. Both have the same type of application, dCSS being a second generation of the first one. This feature makes dLNB compatible with the STB implementing SCR and with new generation dCSS STB.

MAIN FEATURES

- A whole satellite on a single cable
- Adaptable storable configurations
- The ref.723301 programmer allows system configuration and diagnosis
- The dLNB has operation modes that facilitate the dish pointing process
- A given configuration may include some transponders set as SCR I and some others set as dCSS, based on the existing STB for that installation.

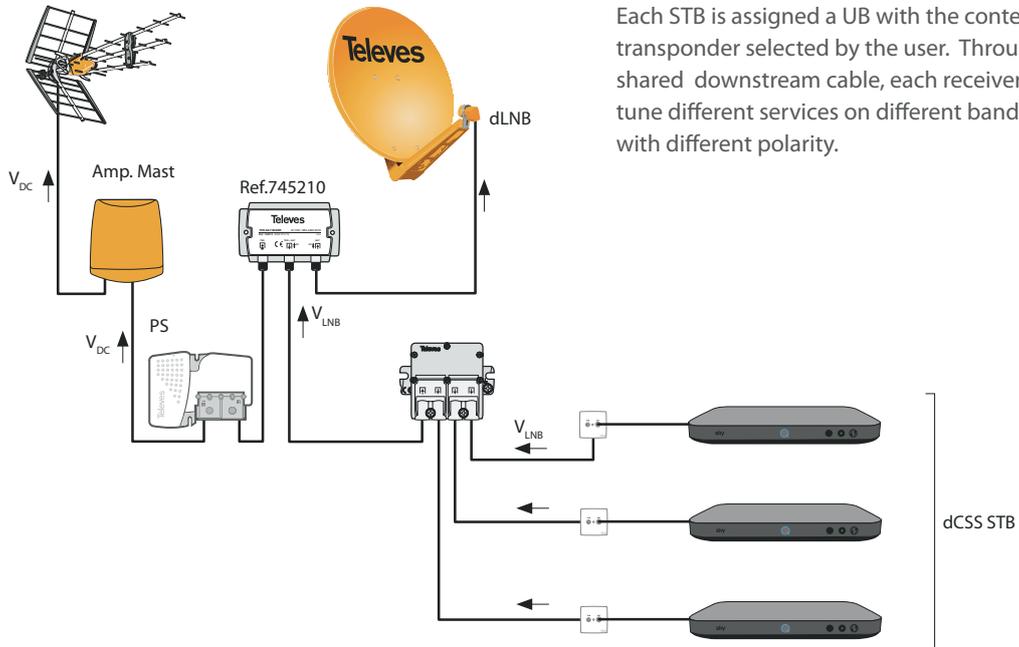

HIGHLIGHTS

- dCSS technology adds value to a SAT distribution
- Using a single cable reduces the complexity of the installation
- Configuration is flexible and scalable
- Compatible with SCR I versions
- Pre-configured references
